DETAILED ACTION

1. Claims 1-4, 6, 8-10 and 12 are pending.
2. Applicant amended claims 1-4, 6, 8 and 12 in the amendment filed on May 31, 2005.
3. Claims 5, 7 and 11 have been canceled.
4. The indication of allowability of claims 1-4, 6, 8-10 and 12 in the previous Office action dated May 31, 2005 are withdrawn in view of the 101 issues as presented below. Moreover, objections to claims 3, 6, 9 and 12 are outlined below for failure to further limit the parent claims:

Claim Rejections - 35 USC § 101

5. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-4, 6, 8-10 and 12 are rejected under 35 U.S.C. 101 because the claims are not tangible. These claims defined a method and generator wherein none of the elements or features of the claimed invention are necessarily implemented in hardware. The specification defines most of the enabling disclosure as functional blocks and not as being implemented in any type of hardware (specification, pg. 11, lines 29-30). It is suggested to amend the claims to specify a hardware embodiment, such as defining at least one of the steps as necessarily implemented in hardware.

Specification

6. Claims 3, 4, 6, 9, 10 and 12 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The test for a dependent claim is whether the dependent claim includes every limitation of the parent claim. In the case of dependent claims 3 and 4, these claims define a multi-carrier transmitter comprising the pseudo-random sequence generator defined in parent claim 2; as such, claims 3 and 4 do not include every limitation of the pseudo-random sequence generator defined in claim 2. In the case of dependent claim 6, this claim defines a multi-carrier receiver comprising the pseudo-random sequence generator defined in parent claim 2; as such, claim 6 does not include every limitation of the pseudo-random sequence generator defined in claim 2. In the case of dependent claims 9 and 10, these claims define a multi-carrier transmitter comprising the pseudo-random sequence generator defined in parent claim 8; as such, claims 9 and 10 do not include every limitation of the pseudo-random sequence generator defined in claim 8. In the case of dependent claim 12, this claim defines a multi-carrier receiver comprising the pseudo-random sequence generator defined in parent claim 8; as such, claim 12 does not include every limitation of the pseudo-random sequence generator defined in claim 8.
